

LINEAR MOTION CONTROL

Technical Data Sheet

Profile Rail Brake, Generation II

A New Standard In Performance

Nexen's RB Series of linear profile guide rail brakes use spring force to secure the load in holding applications. Superior response time and high force for stopping and holding in e-stop and power-off situations. Each RB brake clamps directly onto the center of the guide rail to provide positive braking and holding in all axes, with no effect on bearing surfaces. These profile rail brakes hold position accurately by reducing drive train backlash and elasticity.

Nexen's RB Series is engineered for dependable performance. With a revolutionary set of patented features, the RB Series provides an industry leading braking solution for linear profile guide rails. If personnel safety is required, an unrelated, redundant safety system is recommended.

- Large friction facing contact area for consistent performance and low rail wear
- Field serviceable friction facing replacement
- Ideal for power-off, e-stop and holding applications
- Low backlash for accurate position holding
- Brake geometry is similar to linear bearing cassettes for easy installation
- Provides stiffness and eliminates vibration in linear drives
- Large clearance between brake and rail compensates for installation misalignment
- No lubrication or periodic maintenance required
- Models available to fit most common profile guide rails
- Highest spring engaged / air released holding force on the market
- Static holding cycle life in excess of one million cycles

Rail Brake Specifications

Specifications

Model	Holding Force (F) (minimum)	Backlash at Full Brake Force (maximum)	Release Pressure (minimum)	Starting Engagement Time ¹ (t _e)	Mass (average)
RB15B	500 N [112 lbs]	Up to 0.10 mm [0.004 in]	5.5 bar [80 psi]	0.049 sec.	0.41 Kg [0.904 lbs]
RB20B	800 N [180 lbs]	Up to 0.13 mm [0.005 in]	5.5 bar [80 psi]	0.044 sec.	0.62 Kg [1.367 lbs]
RB25B	1000 N [225 lbs]	Up to 0.20 mm [0.008 in]	5.5 bar [80 psi]	0.050 sec.	0.84 Kg [1.86 lbs]
RB30B	1300 N [292 lbs]	Up to .020 mm [0.008 in]	5.5 bar [80 psi]	0.070 sec.	1.54 Kg [3.40 lbs]
RB35B	1600 N [360 lbs]	Up to 0.20 mm [0.008 in]	5.5 bar [80 psi]	0.070 sec.	2.04 Kg [4.50 lbs]
RB45B	2600 N [585 lbs]	Up to 0.20 mm [0.008 in]	5.5 bar [80 psi]	0.080 sec.	3.48 Kg [7.68 lbs]
RBL55B	2600 N [585 lbs]	Up to 0.20 mm [0.008 in]	5.5 bar [80 psi]	0.225 sec.	5.21 Kg [11.49 lbs]
RBL65B	3400 N [764 lbs]	Up to 0.20 mm [0.008 in]	5.5 bar [80 psi]	0.230 sec.	7.10 Kg [15.65 lbs]

¹ Average, full engagement time with up to 2 meters length of 4mm, polyurethane tube, and 1.4 C_v, 24 volt directional control valve and no quick exhaust.

Typical Mounting Arrangement

Rail Brake Sample Calculations for Emergency Stops

SAMPLE DATA

Brake Model ^{1,2}	Brake Force (F) ¹	Brake Engagement Time (t _e) ¹	Acceleration of Gravity (g)	Mass of Load (m)	Load Velocity (V)
RB25B	1000 N	0.050 seconds	9.8 m/s ²	45.4 kg	0.50 m/s

¹For brake specifications, see Specifications Table on page 4.

²RBL65B not recommended for E-Stops.

HORIZONTAL TRAVEL (X and Y axis)

Dynamic Stopping Time (in seconds):

$$t_T = \frac{m \cdot V}{F} + t_e$$

$$t_T = \frac{45.4 \cdot 0.50}{1000} + .050 = 0.073 \text{ seconds}$$

Dynamic Stopping Distance (in meters):

Distance of Travel During Brake Engagement (L_e)

$$L_e = V \cdot t_e$$

$$L_e = 0.5 \cdot 0.050 = 0.025 \text{ meters}$$

Stopping Distance (L_s) at Full Brake Force

$$L_s = \frac{0.5 \cdot m \cdot V^2}{F}$$

$$L_s = \frac{0.5 \cdot 45.4 \cdot 0.50^2}{1000} = 0.006 \text{ meters}$$

Total Travel Distance

$$L_T = L_e + L_s$$

$$L_T = 0.025 + 0.006 = 0.031 \text{ meters or } 31 \text{ mm}$$

In this example, the load will travel 31 mm [1.22 in] from the time the RB25B engages until the system is brought to a complete stop.

VERTICAL TRAVEL (DOWNWARD) (Z axis)

Dynamic Stopping Time (in seconds):

$$t_T = \frac{m \cdot (g \cdot t_e + V)}{[F - (m \cdot g)]} + t_e$$

$$t_T = \frac{45.4 \cdot (9.8 \cdot 0.050 + 0.50)}{[1000 - (45.4 \cdot 9.8)]} + 0.050 = 0.131 \text{ seconds}$$

Dynamic Stopping Distance (in meters):

Distance of Travel During Brake Engagement (L_e)

$$L_e = 0.5 \cdot (t_e^2) \cdot g + V \cdot t_e$$

$$L_e = 0.5 \cdot (.050^2) \cdot 9.8 + .5 \cdot .050 = 0.037 \text{ meters}$$

Stopping Distance (L_s) at Full Brake Force

$$L_s = 0.5 \cdot [(t_e \cdot g) + V] \cdot (t_T - t_e)$$

$$L_s = 0.5 \cdot [(0.050 \cdot 9.8) + 0.5] \cdot (0.131 - 0.050)$$

$$L_s = 0.040 \text{ meters}$$

Total Travel Distance

$$L_T = L_e + L_s$$

$$L_T = 0.037 + 0.040 = 0.077 \text{ meters or } 77 \text{ mm}$$

In this example, the load will travel 77 mm [3.03 in] from the time the RB25B engages until the system is brought to a complete stop.
