FTP Series

High Force Electric Press Actuators

Hydraulic Press Replacement

Based on planetary rollers screw technology, the FTP Series high force electric press actuators were designed to provide very high force in a small package size making them an ideal alternative to hydraulic cylinders in pressing applications. The FTP offers force density not attainable with more common ball screw based electric actuators, up to 15X the life and 2X the force density in most cases.

Programmable and Accurate

Attaining any kind of accuracy with a traditional hydraulic solution requires complicated servo valves that are difficult to set up and need frequent adjustment for optimum performance. Once set, changeover to a different part or mode of operation is equally as troublesome. The all-electric FTP Series utilizes commonly understood servo motor technology, offering accuracy, control and flexibility not available with hydraulics.

Reliable and Efficient

The FTP Series high force electric press actuators allow machine builders to meet the ever-increasing performance demands of their customers while minimizing or eliminating the maintenance issues and downtime associated with traditional hydraulic solutions. Their programmability and flexibility significantly reduces changeover time between production runs enabling smaller batch sizes, and they typically consume 25% less energy than a typical hydraulic solution. Increase your operational efficiency today by switching to the FTP Series.

Product Features

- 1 - Inline direct drive
- 2 - Parallel, 1:1 belt reduction
- 3 - Male, metric thread
- 4 - Female, metric thread
- 5 - External limit switch - N.O., PNP or NPN*
- 6 - External limit switch - N.C., PNP or NPN*

*Ordered Separately

Data Curves

Estimated Service Life

The underlying formula that defines this value is:

L_{10} = Lifetime estimate in millions of cycles, where:

C_a = Dynamic load rating (lbf)

F_{press} = Press force (press distance \leq 12mm)

$$L_{10} = \left(\frac{C_a}{F_{press}} \right)^3$$

Service Life Estimate Assumptions:

- Sufficient quality and quantity of lubrication is maintained throughout service life
- Bearing and screw temperature between 20° C and 40° C
- No mechanical hard stops (external or internal) or impact loads
- No external side loads

FTP Press Sizing Guide

Exlar's FTP series actuators meet the most demanding pressing applications in the market. Successful applications include bearing press, stamping, and leak testing. Due to design considerations for the FTP series, the extreme forces are only achievable when extending the main rod. See manufacturer's specifications on page 70 for maximum force ratings for each actuator in the FTP series.

For any press force less than the maximum rating, calculate the estimated L_{10} life by using the calculation method listed. The press distance must not exceed the maximum rated press distance listed.

If your application is outside the specifications, please fill in the following table and chart. Send the completed document to cha_applications@curtisswright.com. Exlar's sales engineering team will review the application to determine if Exlar has a solution to meet the requirements.
